Investment Objective, Strategy and Benchmark

To outperform (before fees and tax) the Investment Option's Performance Benchmark – a weighted average mix of market indices relevant to the Option's long-term strategic asset allocation. It may invest in one or multiple UMFs and/or directly invest in Authorised Investments to have an actively managed growth portfolio whilst adopting a lens based on social, environmental, ethical, responsible investing and financial credentials.

¹ Total Management Fees is provided on an after-taxation basis and comprised of the Futurity Management Fees and UMF Investment Fees (includes the estimated UMF indirect costs) – see 'Fees and Other Costs' – Part A of PDS.

² Longer investment timeframes maximise the benefits of investment compounding, especially for medium and higher taxed investors doing this under an Education Bond's Tax-Paid investment structure. Education Bonds also have an 'Investment Bond 10-Year Advantage' meaning the benefits of Tax-free access to your Bond after 10 years from its Commencement Date, subject to certain conditions as explained in Part A of our PDS.

* Performance is measured by Investment Option price movements (after Tax and Management fees). It is quoted using the sell (exit) price and is net of all portfolio taxes, management fees, and fund expenses, however does not take into account any stamp duty, transaction costs and management fee rebates. Past performance is not a reliable indicator of future performance.

**END OF FINANCIAL YEAR MARKET SUMMARY (2025-26)**

The 2025–26 financial year was characterised by resilient global economic growth, ongoing inflation pressures, rapid advances in artificial intelligence (AI) investment, and periods of heightened geopolitical uncertainty. Global share markets delivered strong returns, supported by robust corporate earnings and continued investment in AI-related infrastructure, semiconductors and data centres. Emerging markets, particularly those with exposure to technology supply chains, were among the strongest performers.

Australian equities generated positive returns but lagged global markets, reflecting more modest earnings growth, limited technology exposure and the impact of higher interest rates on households and businesses. The resources sector benefited from

stronger commodity prices, while the domestic economy faced challenges from persistent inflation, softer consumer confidence and rising borrowing costs.

Bond markets experienced ongoing volatility as investors balanced expectations for lower interest rates against concerns about inflation and geopolitical risks. Longer-term bond yields remained elevated, although fixed interest assets continued to provide diversification benefits within portfolios.

Overall, diversified investors were rewarded by strong global equity markets, while maintaining a focus on long-term investment objectives remained important amid an evolving economic and geopolitical landscape.
